AMPIO

YOUR SMART SOLUTIONS PARTNER

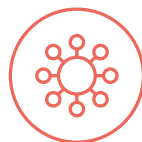

The satisfaction of our clients and partners is an absolute priority for us. Ampio's main purpose is to improve the comfort of life by providing an effortless and extensive system for building management, which takes into consideration individual needs of our clients.

We are pioneers in the building automation industry with our innovative solutions. Our system is one of the most advanced and most comprehensive on the Polish market. The CAN technology from BOSCH is at the core of our business. The CAN technology is characterised by a dispersed system, which is used by the industry leaders.

We have over 20 years of experience in the production of electronic components. Our system is designed and manufactured entirely in Poland. Currently, our international footprint stretches over 20 countries and is constantly growing. We are also proud holders of the ISO 9001:2015 certificate, which guarantees only the highest quality. Our products have been working without malfunctioning for years in hundreds of buildings, which is why we give a 3-year basic warranty on them.

IMPLEMENTATION OPTIONS

It is important in the modern construction industry to plan the electrical installation well, so that it is universal enough for the future owner to be able to transform the property into a smart property.

■ MINI option

This is the basic variant of a smart installation, which includes maintaining the standard wiring method with the addition of a CAN cable (UTP) to control points (e.g., light fitting, roller blinds fitting). The CAN cable is then pulled throughout the apartment/house. The next step here is using enlarged electrical boxes (2-gang, flush-mounted), so that it can hold an electrical box controller that will enable automation of e.g., lights, sockets, or roller blinds.

■ STANDARD option

This variant of a smart installation extends the MINI option by equipping the DB board with an M-SERV-s module. Thanks to that, the client can access the property remotely even in its development state, manage the heating system and a couple of light points, with the option of expanding the automation further in the future.

■ PRESTIGE option

This is a variant configured according to the developer's individual offer. The building automation scope of the MAXI option includes all functionalities of the MIDI option plus any additional functionalities requested by the developer. Even at the development stage, a property with the MAXI option included by the developer constitutes an extremely attractive offer. The more functionalities incorporated in this variant, the more prestigious the investment.

WITH THE AMPIO SYSTEM, ADVERTISING YOUR PROPERTY WILL BE A BREEZE!

Considering the current trend of the omnipresent "Smart Home" in various house devices (smart globes, smart blinds, smart vacuuming robots, smart appliances, etc.), you can meet your clients' requirements and present them with something extraordinary. Additionally, you will get your prospective clients' attention with the possibility of cost saving on electricity, water, and heating, or with information about the air quality or sudden weather changes.

By offering an investment equipped with the Ampio system, you will provide your client not only with comfort, safety, and state-of-the-art solutions, but also with the leeway of expanding the system to the client's individual needs. This will make your offer stand out on the market and will increase the potential clients' interest.

The Ampio system is a Polish invention with the most reliable, wired, decentralised solution. Ampio products are constantly advanced and boast extensive integration possibilities. We are staying attuned to the changing needs of our users.

Equipping an investment with the elements mentioned in each of the options does increase the initial budget, but it will also generate more income thanks to an increased price per sq. m. On top of that, a property that includes automation solutions can also be expanded on by the Clients at a later stage and according to their budgets.
